

TRUMPET HORN 24 INCH

Description:- The 24-inch Trumpet / Reflex Horn speaker represents a robust solution for demanding public address and outdoor sound projection needs. Its large 24-inch bell (flare) allows the horn to move more air, giving it the ability to throw sound over longer distances while maintaining clarity—especially useful for announcements.

Key Specification:-

- A 24-inch horn has a big outer bell which helps in projecting sound over very long distances and improves low-mid frequency cutoff.
- Because of its size and horn loading, it delivers louder SPL (Sound Pressure Level) for a given power input. Good for outdoor PA, loud announcements etc.
- Usually made of lightweight but durable material like aluminum (or sometimes aluminum alloy), often with protective finish/coating to resist weather, UV.

Features:-

MODEL NO.	TRUMPET HORN 24INCH
Flare Diameter	24 inches (outer bell diameter)
Throat Thread	2 3/8" × 18 TPI
Material	Aluminum or mild steel.
Coating	Often powder-coated Grey / Black / Aluminum natural
