

## PN-518 NETWORK PLATE

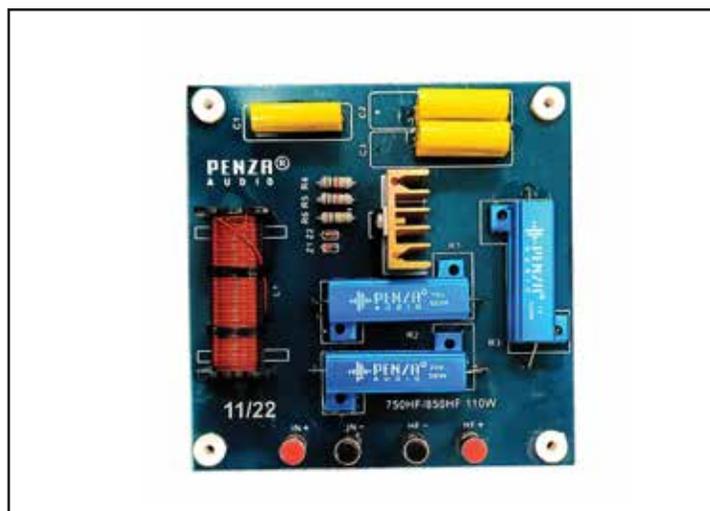

**Description-:** The Penza Audio PN 518 is a passive speaker crossover network designed specifically for high-frequency (HF) applications, primarily used with 518 series HF compression drivers in two-way speaker systems. It is crucial for optimizing sound quality and protecting speaker components in professional audio setups.

### Key Specification-:

- Tailored to efficiently filter and direct high frequencies to compatible HF drivers, such as the PN-518 series.
- Operates without external power, utilizing high-quality passive components like capacitors and inductors to achieve signal separation and filtering.
- Features high-quality components designed to handle significant power levels while minimizing distortion, ensuring clean and dynamic sound reproduction.
- Built for durability, often using materials like fiber glass and featuring a robust, compact design suitable for integration into various speaker cabinets.

### Features-:

<b>MODEL NO.</b>	<b>PN-518</b>
MODEL	PN-518
TYPE	Network Plate
BRAND	Penza

**PN-518**
